MEMORANDUM FOR: Executive Director, NPIC

SUBJECT : Staff Study for Eyepoint of Wide-Field High-Power
Anamorphic Stereoviewer

1. The attached staff study outlines a potential deficiency with a future instrument. The study concludes that the best solution is to provide contact lenses for those operators who desire to use them, and it recommends that NPIC establish such a policy.

2. A recent development in the contact lens field, the introduction of a lens known as the "softlens," makes this recommendation very practical and extremely promising. Because these lenses are so new, certain factors are not known about their performance. For this reason it is recommended that these lenses be investigated by the Office of Medical Services.

3. Because the recommendations affect basic policy at NPIC, it is requested that you approve the recommendations before further action is taken.
